## **Chapter 2 Notes**

## 1. Swingers to Walkers (23-3m ya)

- Early Apes (23 million years ago)
  - Perfectly adapted for forest life with long arms, curved fingers, flexible shoulders
  - Forward-facing eyes to judge jumping distances
- Climate Change Challenge (10 million years ago)
  - o Earth cooled, forests shrank, savannas grew
  - Some apes ventured into open grasslands
- Walking Upright (7 million years ago)
  - First "hominins" stood on two legs
  - Advantages: seeing over tall grass, traveling longer distances, keeping cooler, freeing hands

## • Notable Early Hominins

- o Ardipithecus (4.4 million years ago): Could walk upright and climb trees
- o Australopithecus (4 million years ago): Clearly built for walking upright
- o Lucy (3.2 million years ago): Famous skeleton showing upright walking
